

Jalen Edusei

jalen.edusei@gmail.com | 770-714-0190 | Atlanta, GA | jalenedusei.com | linkedin.com/in/jalenedusei | github.com/jke48222

Full-stack software engineer shipping customer-facing web and commerce applications for paying clients: React/TypeScript frontends, Node and REST/GraphQL services on PostgreSQL, CMS content modeling, and CI/CD on GitHub Actions.

EDUCATION

University of Georgia, Morehead Honors College, Athens, GA
Bachelor of Science in Computer Systems Engineering, cum laude

May 2026
GPA: 3.61 / 4.00

Relevant Coursework: Data Structures, Systems Programming, Software Development, Discrete Mathematics, Embedded Systems I & II, Advanced Digital Design, Human-Computer Interaction

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Swift, Java, SQL, Elixir, C, C++

Frontend: React 19, Next.js (App Router, ISR), Tailwind CSS, three.js / React Three Fiber, Framer Motion, WCAG AA accessibility

Backend & APIs: Node.js, Express, REST and GraphQL API design and integration (Shopify Storefront, Laylo), PostgreSQL (row-level security, transactional outbox), Supabase, WebSockets, event-driven pipelines (MQTT, outbox)

CMS & Commerce: TinaCMS content modeling (typed collections, editorial workflows), Shopify Storefront API and hosted storefront, order-lifecycle and inventory systems

DevOps & AI: GitHub Actions, Git-based workflows, Docker, Kubernetes, Vercel, AI-paired development (Claude Code, Cursor), Anthropic Claude API, code review, automated testing (Vitest, ExUnit, XCTest)

EXPERIENCE

Freelance Software Engineer, *Self-Employed*, Atlanta, GA

May 2026 – Present

- Designed, built, and shipped kulenterprises.com for a Georgia freight carrier, running the engagement from discovery through go-live and post-launch support: 22 statically generated Next.js / React / TypeScript pages on a git-backed TinaCMS content model so the client edits every word without code, four rate-limited forms through Resend, and WCAG AA-audited contrast.
- Built and shipped akilahmali.com for a recording artist and integrated its commerce: a headless Shopify Storefront (GraphQL) cart with httpOnly cookie sessions and a server-side mutation boundary, consolidated onto Shopify's hosted storefront after a security review, alongside a real-time 3D scene in three.js / React Three Fiber.
- Extended the freight-carrier engagement with a broker credit-vetting portal on Supabase: a 12-question screening workflow, risk ratings with an admin-only do-not-load block, and compliance rules held in Postgres (row-level security, audit log, atomic SQL functions) behind invite-only auth with four staff roles.

Capital One, *Business Analyst Intern*, McLean, VA

Jun 2025 – Aug 2025

- Built the business case for a CreditWise Notifications Preferences Center projected to centralize communication management for 60M+ customer accounts; presented the recommendation to senior leadership.
- Analyzed email-campaign performance in SQL, Python, and Excel, creating a valuation framework that quantified engagement and retention impact and informed product-roadmap decisions.

UGA Small Satellite Research Lab, *Flight Software Developer (MEMESat-1)*, Athens, GA

Mar 2024 – Dec 2024

- Developed embedded C/C++ flight software on STM32 microcontrollers for the MEMESat-1 CubeSat, hardening it with unit and integration tests and reviewing teammates' code in the shared codebase.

PROJECTS

Relay: eCommerce Order Management & Fulfillment | *Elixir, Phoenix, PostgreSQL, React, TypeScript, CI/CD*

Jul 2026

- Built an event-driven order-management system covering checkout to delivery: a 13-route JSON API, a Kafka-style transactional outbox, an 8-state order machine enforced under row locks, inventory allocation across four fulfillment centers, and a live React dashboard over WebSockets.
- Prevented oversell with SELECT ...FOR UPDATE allocation plus a CHECK constraint and Idempotency-Key replay; 52 failure-mode tests (ExUnit, Vitest) run in GitHub Actions; Docker and Kubernetes manifests.

Live Election Platform | *Next.js 14, JavaScript, Supabase (Postgres, Realtime, RLS)*

Mar 2026 – Jun 2026

- Shipped a customer-facing realtime election system (14 roles, 39 candidates): three-state election machine, SHA-256 device fingerprinting with a UNIQUE(role_id, device_hash) constraint and row-level security, and a 29-finding security audit verified by 42 HTTP-level tests.

AnimalDot Smart Bed (Senior Capstone) | *ESP32, C++, Express, PostgreSQL, MQTT, React Native*

Aug 2025 – May 2026

- Led all software (36 of 37 commits) on a six-person team: device telemetry flows over a binary MQTT protocol into a JWT-authenticated Express/PostgreSQL backend and out to React Native and SwiftUI apps over WebSockets, with about 53 tests and two CI pipelines.

Exocortex: Local-First Personal Memory System | *Swift, SQLite/FTS5, MLX, Foundation Models, MCP*

Aug 2026

- Built a local-first memory system that gives AI tools one private, shared memory: 14 data streams ingested into a 100,000-event SQLite/FTS5 store, hybrid BM25-plus-vector search measuring 0.95 Recall@1 against a 0.55 keyword baseline, and an MCP server with per-client trust tiers.

LEADERSHIP & HONORS

Vice President, NSBE UGA Chapter (100+ members) | Tau Beta Pi | Extraordinary Engineer Award | 2x Presidential Scholar | Dean's List
